

## Test Plan for User Stories

### 1. Registered User Login From a New Device

#### Objective:

Test the login process for a registered user from a new device and ensure the system logs the user out from other devices, sends notifications, and redirects the user to the home page.

#### Test Strategy:

- **Functional Testing:** Ensure all functionalities related to the login process are working as expected.
- **Security Testing:** Verify that the system is securely logging out the user from other devices.
- **Usability Testing:** Check that the login experience is smooth and the user can easily access their account.
- **Notification Testing:** Verify that SMS notifications are sent correctly after login.

#### Test Cases:

##### 1. Acceptance Case:

- Verify that a user can successfully log in from a new device.
- Verify that the system sends an SMS notification to the user after a successful login from the new device.
- Verify that the user is logged out from all other devices.
- Verify the user is redirected to the home page.

##### 2. Edge Case:

- Try logging in from a new device with incorrect credentials and verify that the user is unable to log in.
- Test login failure after entering incorrect OTP and verify the appropriate error message.
- Test login with an expired session and verify the system handles the session timeout properly.

---

### 2. Individual Investor - Upgrade To Premium

#### Objective:

Ensure that a verified individual investor can upgrade their account to a premium account with the correct documentation and that the upgrade request is properly reviewed by the compliance department.

#### Test Strategy:

- **Functional Testing:** Ensure all aspects of upgrading to a premium account work as intended.
- **User Interaction Testing:** Verify the user experience during the upgrade process.
- **Compliance Workflow Testing:** Test the functionality for compliance department reviews and notifications.

#### **Test Cases:**

##### **1. Acceptance Case:**

- Verify that a verified individual investor can see the upgrade option.
- Verify that the user can upload the required documents after selecting one of the upgrade options.
- Verify that the system notifies the user once the documents are uploaded successfully.
- Verify that the compliance team receives the upgrade request for review.

##### **2. Edge Case:**

- Test document upload with invalid formats or sizes and verify that the system displays appropriate error messages.
  - Test upgrade request approval after document upload and verify that the user gets notified.
  - Test the scenario where the investor does not select any of the available options and verify that the system prompts for a selection.
- 

### **3. Approvals Notifications | SMS**

#### **Objective:**

Ensure that loan requesters receive timely SMS notifications regarding loan status (approval, rejection, and reason for rejection).

#### **Test Strategy:**

- **Functional Testing:** Ensure notifications are triggered correctly based on the loan status.
- **SMS Notification Testing:** Verify the content and delivery of SMS notifications.
- **Boundary Testing:** Ensure that the rejection notification includes all reasons specified by the relation manager.

#### **Test Cases:**

##### **1. Acceptance Case:**

- Verify that a loan requester receives an SMS notification after loan approval.
- Verify that a loan requester receives an SMS with rejection reasons if the loan is rejected.

- Verify that the SMS includes the rejection reasons provided by the relation manager.
  - 2. **Edge Case:**
    - Test loan approval scenario where SMS is not sent due to SMS service failure.
    - Test rejection without specified reasons and verify that the system still sends a rejection notification.
- 

#### 4. Departments Approval

**Objective:**

Ensure that department staff members can approve loan requests and view the department approvals.

**Test Strategy:**

- **Functional Testing:** Ensure that the loan approval process works seamlessly across departments.
- **Role-based Testing:** Verify that only department staff members can approve requests and view department approvals.

**Test Cases:**

1. **Acceptance Case:**
    - Verify that department staff members can approve loan requests.
    - Verify that the system accurately displays all department approvals and timestamps for each department.
  2. **Edge Case:**
    - Test approving a loan request that has already been approved by other departments and verify that the system handles this correctly.
    - Test what happens if a department member mistakenly approves a loan that doesn't meet the requirements and check if it's properly handled in the system.
- 

#### 5. Corporate Investor - Commercial Registration Verification via Third Party [X]

**Objective:**

Ensure that the system correctly verifies the commercial registration number of corporate investors through third-party integration.

**Test Strategy:**

- **Functional Testing:** Ensure correct communication with third-party service [X] and validation of commercial registration numbers.

- **Boundary Testing:** Validate edge cases related to incorrect data and validation failures.

**Test Cases:**

**1. Acceptance Case:**

- Verify that the system correctly verifies the commercial registration number with third-party service [X] when the registration number is valid.
- Verify that the system prompts for a valid commercial registration number when the input is invalid.
- Verify that the system handles the "Start Date" validation and ensures that companies less than two years old cannot proceed.

**2. Edge Case:**

- Test with an invalid commercial registration number and ensure the system prompts the user to enter a new one.
- Test with a start date of less than two years and verify that the system blocks the process and displays the appropriate message.
- Test with missing data or incomplete input and verify that the system doesn't allow submission until the missing data is provided.
